About Me

I'm a React.JS developer, with a passion for creating web applications. With extensive front-end development experience: I have had the opportunity to work on both long-term and short-term projects as part of a collaborative team. My experience is in the design and development of web applications using React, where I have contributed to achieving a consistent visual theme and building robust, maintainable architectures from the ground up.
I take pride in my ability to support existing functionality, develop new features, and effectively work with legacy code. I am dedicated to creating web applications that not only meet the technical requirements but also provide an excellent user experience.
If you have any further questions or need additional information, please feel free to ask.

Experience

- August 2022 - September 2023
  FRONTEND DEVELOPER (REACT)
  Ruby Labs

  Development of web applications using react.js. Using open libraries to implement it. I was involved in the development of sales funnels for better sales of the company's main products.

- June 2021 - July 2022
  FRONTEND DEVELOPER
  ATL (internet shop)

  Design and development of web applications (react). Helped to achieve a consistent look and visual theme, build a stable and maintainable architecture from scratch.
